

README FILE

Japanese American Redress Verification Information System (JARVIS) Files NN3-060-06-016 (Public Use Files) General Records of the Department of Justice (Record Group 60)

This zip file contains the Japanese American Redress Verification Information System (JARVIS) public use files. JARVIS contains records of individuals of Japanese ancestry eligible for restitution by the U.S. Government for being evacuated, relocated, interned, or otherwise deprived of their liberty and property as a result of the U.S. Government actions during World War II. The public use version does not contain names and addresses of eligible recipients.

There are two folders in the zip file: Data_CodeLists and Technical_Documentation. Below is a list of files with associated metadata.

The data files and code lists contain field-delimited records with a caret (^) delimiter enclosed by tilde (~).

The scanned technical documentation includes the JARVIS system design manuals and schemas. The NARA-prepared documentation includes layouts that accurately reflect the fields found in the files and notes discrepancies found during processing.

JARVIS was used by the agency as two systems: JARVIS and JARVIS 2. The following list of files identifies which files came from JARVIS versus JARVIS 2. See the user note in the NARA-prepared documentation (490_1ND.pdf) for more details.
